

SED1520 Series

Dot Matrix LCD Controller Driver

- Ultra Low Power Consumption
- Built-in Video RAM

■ DESCRIPTION

The SED1520 family of dot matrix LCD drivers are designed for the display of characters and graphics. The drivers generate LCD drive signals derived from bit mapped data stored in an internal RAM.

The drivers are available in two configurations

The SED1520 family drivers incorporate innovative circuit design strategies to achieve very low power dissipation at a wide range of operating voltages.

These features give the designer a flexible means of implementing small to medium size LCD displays for compact, low power systems.

- The SED1520 which is able to drive two lines of twelve characters each.
- The SED1521 which is able to drive 80 segments for extension.
- The SED1522 which is able to drive one line of thirteen characters each.

■ FEATURES

- Fast 8-bit MPU interface compatible with 80- and 68-family microcomputers
- Many command set
- Total 80 (segment + common) drive sets
- Low power — 30 μ W at 2 kHz external clock
- Wide range of supply voltages
 - $V_{DD} - V_{SS}$: -2.4 to -7.0 V
 - $V_{DD} - V_5$: -3.5 to -13.0 V

- Notes:
- All voltages are specified relative to V_{DD} = 0 V.
 - The following relation must be always hold
V_{DD} ≥ V₁ ≥ V₂ ≥ V₃ ≥ V₄ ≥ V₅
 - Exceeding the absolute maximum ratings may cause permanent damage to the device. Functional operation under these conditions is not implied.
 - Moisture resistance of flat packages can be reduced by the soldering process, so care should be taken to avoid thermally stressing the package during board assembly.
