

ORIENT DISPLAY

MAKE THINGS POSSIBLE

August 27th, 2024

Dear Valued Customers:

As of July 2024, Orient Display offers a variety of wide temperature color displays in different sizes, resolutions, interfaces, and brightness levels:

2.0", 2.4", 2.8", 3.5", 4.0", 4.3", 5.0", 6.8", 7.0", 8.0", 9.0", 10.1", 10.4", 12.1", 12.3", 15.0", 15.6", 18.5", 19.0".

The market has a growing demand for displays in automotive, e-bike, EV chargers, gas pumps, and other outdoor devices. Typically, wide temperature TFT and IPS displays are scarce, and finding cost-effective options is even more challenging. Thanks to the combined efforts of Orient Display's sourcing and engineering teams, we now offer an extensive range of wide temperature color displays. These displays operate within a temperature range of approximately -30°C to 85°C, with some models capable of achieving even wider temperature ranges upon request.

Please contact us (info@orientdisplay.com or sales@orientdisplay.com) for further information and questions.
